

Catalog all your technology and allocate your costs across cost centers and organisations

What's Clearpulse?

Clearpulse is a powerful but easy-to-use IT asset management solution that empowers businesses to catalog every device and software on their network.

Clearpulse allows you to allocate your IT spend for hardware and software assets to each cost center in a clear, fine-grained way. Armed with this insight, your business can uncover opportunities for cost-savings, identify possible IT dependency risks, and drive strategic supplier management.

Features

Clearpulse IT Asset Manager

- ▶ Advanced automation to rapidly bring together all the information you need to make well-informed operational and commercial IT decisions.
- ▶ The solution combines information on costs and contracts with a full inventory of all your software and hardware, enabling a data-driven approach to IT lifecycle management.

Clearpulse Software Asset Manager

- ▶ Licensing can pose complex challenges for businesses, especially if the corporate IT policy allows users to choose which software to install on their devices.
- ▶ Clearpulse Software Asset Manager shows all the software in use across the business, together with the relevant contract and licensing data. The result? Fast and accurate confirmation that your business is complying with all software licensing requirements, and the ability to cut out unnecessary spend on duplicate or unused software licenses.

Clearpulse Configuration Management Database (CMDB)

- ▶ Based on an intuitive graphical interface, Clearpulse CMDB allows the user to easily create documentation of all IT infrastructure components and their dependencies—simplifying the change management process and enabling faster remediation of technical issues.

Clearpulse Finance Manager

- ▶ For internal IT service providers, timely insight into the usage and ownership of IT assets is crucial to enable accurate allocation of costs and billing
- ▶ With Clearpulse Finance Manager, organizations can manage internal billing for IT assets from an intuitive, central dashboard. The solution is easy to integrate with ERP systems, enabling automated billing and advanced analytics reporting capabilities.

Clearpulse Deployment

- ▶ Clearpulse is available in the cloud or on-premises.

Clearpulse Mobile Device Manager

- ▶ Smartphones and tablets are becoming more deeply embedded in daily business operations—but making sure that mobile devices are compliant with corporate IT policies and deprovisioned when employees leave the company can create time-consuming manual work.
- ▶ Accurate registry of every mobile device, its owner, and installed software, helping to ensure compliance.

Clearpulse Contract Manager

- ▶ IT organizations often depend on agreements with external suppliers to deliver services cost-effectively: including warranties, support contacts, and service-level agreements.
- ▶ To enable strategic supplier management, Clearpulse Contract Manager brings together relevant information in these areas for all software and hardware assets. The solution creates a clear overview of contract terms, durations, and costs, enabling more productive supplier negotiations.

Clearpulse

! Clearpulse is available in the cloud or on-premises

With Clearpulse, you get a clear and flexible pricing model — helping to ensure you only pay for what you need.
